

MEDITE is our main supplier for MDF, which is the base of Greengridz®. MDF panels are fabricated sustainably with responsibly harvested wood.

At Greenmarking, MDF panels come in and leave our production site as stronger and lighter Greengridz® panels: the foundation for sustainable worktops.

Trucks leave Greenmarking's production site entirely filled and using less fuel due to the little weight of the Greengridz panels.

Sustainable countertops and other applications of Greengridz find their way to housing corporations and offices through our clients.
